

A little camp. Big discoveries.

A printable companion to the 24 camps and six learning trails in Mather TV.

1 / Choose a world

Apples, animals, ocean creatures, birds, planets and vehicles all become things to compare. Let your child pick a camp and a comfortable group size.

2 / Build, see, then explain

Move real objects first. Line them up in pairs. Only then introduce the numbers and the signs. Ask what changed when you added or removed one object.

3 / Help without rushing

Try: Can each one find a partner? Count by touching one object at a time. A mistake is an invitation to rearrange, count and try again.

4 / Finish with a new setting

Use a different object or arrangement for the last mission. The TV passport records explored camps; a sticker celebrates an adventure, rather than certifying mastery.

PACK YOUR KIT

Use the eight mission cards on pages 2-3, the mat on page 4, tokens on page 5 and your camp passport on page 6. Print two token sheets for large groups of the same object. Buttons, blocks or pebbles work too.

A grown-up reads the prompts. In the app, spoken guidance and the remote do the work. Start with groups up to five, and grow when your child wants a new challenge.

Choose a little mission

Read aloud, build with tokens or real objects, and follow your child's ideas.

More at the orchard

Which group has more apples?

MAKE IT

Put 3 apples on the left and 5 on the right.

WONDER TOGETHER

Pair them. Two on the right have no partner.
Swap sides and ask again.

Fewer flowers

Which garden has fewer flowers?

MAKE IT

Put 6 flowers on the left and 4 on the right.

WONDER TOGETHER

Count each once. How do you know which garden has fewer?

Find a partner

Can every sheep find a friend?

MAKE IT

Put 4 sheep in each group. Spread one group out.

WONDER TOGETHER

Pair them. Spreading out does not add sheep.
Both groups still have four.

Build a balance

Make the leaf piles equal.

MAKE IT

Start with 2 leaves on the left and 5 on the right.
Change only the left pile.

WONDER TOGETHER

Add three to match. Now start with 6 and 4. Can you remove instead?

Choose a little mission

Read aloud, build with tokens or real objects, and follow your child's ideas.

Spot the extras

How many extra apples are there?

MAKE IT

Use 7 on the left and 4 on the right. Match partners first.

WONDER TOGETHER

Count only the unpaired apples. There are three extra on the left.

Empty is a number

What happens when a group is empty?

MAKE IT

Make an empty garden and a garden with 3 flowers. Then empty both.

WONDER TOGETHER

Zero flowers is still a count. Two empty groups are equal.

Meet the signs

Which sign belongs between 3 and 5?

MAKE IT

Build both groups. Write $3 < 5$, $5 > 3$ and $4 = 4$ after comparing.

WONDER TOGETHER

The open side faces the greater number. Say less than, greater than or equal to.

A new camp

Can you solve it with different things?

MAKE IT

Try 4 spoons and 6 spoons. Make the groups equal, then ask how many extra.

WONDER TOGETHER

Rearrange and swap sides. Explain your idea without relying on the picture you saw before.

Two places to compare

Put objects in each camp. Touch each once to count. Line up partners to compare.

LEFT CAMP

RIGHT CAMP

What do you notice?

More / Fewer / Equal / How many extra? Can you make both camps equal? What changes when you move just one?

LEFT COUNT: _____ SIGN: _____ RIGHT COUNT: _____

Little things to count

Cut the cards with a grown-up. Ten of each object. Print twice for larger same-object groups.

				
				
				
				
				
				
				
				

Your explorer passport

Draw, stamp or add a sticker when you finish a camp adventure. Choose your own route.
